# McArdle's Quality GRASS SEEDS

The lawn is the carpet of the outdoor living-room

## Grass Mixtures for Shady Places

**Gro-Sod.** F. H. Woodruff & Sons have found that an analysis of 10-6-4 feeds grass properly throughout the growing season. Nitrogen, the fertilizer element that induces luscious green leaf growth, predominates in this fertilizer. One pound of Gro-Sod

is required for each 100 sq. ft. of lawn area, or 500 lbs. per acre. A fertilizer distributor will do an even, economical job. 25 lbs. \$2.20; 50 lbs. \$3.90; 100 lbs. \$7.75.

The perfect companion for Turf-Maker. Blended of the finest shade-tolerant grasses. Contains Illahee Creeping Red Fescue, Poa trivialis, Chewing's Fescue, Velvet Bent and Fancy Red Top. Lb. \$1.59; 3 lbs. \$4.69; 5 lbs. \$7.70; 25 lbs. \$38.25; 50 lbs. \$75.70.

**McArdle's Shady.** Another one of our special mixtures particularly adapted to shady areas in this vicinity. Contains Fescue, Kentucky Blue Grass, and Rye Grass. Lb. \$1.35; 5 lbs. \$6.50; 25 lbs. \$31.50; 100 lbs. \$120.00.

## Grass Mixtures for Sunny Places

Highest quality lawn seed available anywhere. Blended to produce fine permanent lawns. Contains Certified Colonial Bent, Illahee Creeping Red Fescue, heavyweight Kentucky Blue Grass and Fancy Red Top. Lb. \$1.59; 3 lbs. \$4.69; 5 lbs. \$7.70; 25 lbs. \$38.25; 50 lbs. \$75.70.

**McArdle's Special.** Our own special mixture particularly adapted to soil conditions in this locality. Possesses exceptional staying qualities and produces a rich green lawn of thick growth. Lb. \$1.35; 5 lbs. \$6.50; 25 lbs. \$31.50; 100 lbs. \$120.00.

**Sunilawn.** Although Sunilawn has a rougher texture than the higher-priced mixtures, we consider it very practical. It grows well under rough soil conditions and contains white clover, which we highly recommend. Lb. \$1.00; 5 lbs. \$4.85; 25 lbs. \$23.00; 100 lbs. \$90.00.

## Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crabgrass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

**Wild White Clover.** Lb. \$2.50.

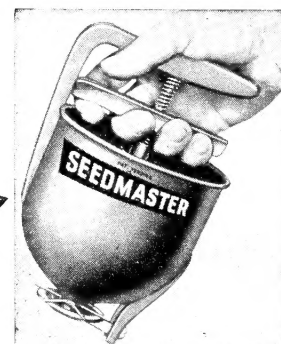

**Common White Clover.** Lb. \$1.75.

## Seaside Mixture

A special mixture of hardy grasses for use in the vicinity of salt water. Contains Seaside Bent, Kentucky Blue, Chewing's Fescue, Creeping Red Fescue and Fancy Red Top. Use 1 lb. per 100 sq. ft. Lb. \$1.25; 5 lbs. \$6.00; 25 lbs. \$28.75; 100 lbs. \$110.00.

Spike  
Roller

The Seedmaster Seeder

A Spike Roller perforates your lawn area, thereby allowing air, moisture and plant food to reach the roots. In dry weather spiking is beneficial because it keeps the soil porous and open.

Small size, 15-in. width. \$15.00.

Large size, 24-in. width. \$45.00.

Seedmaster sows grass seed evenly. It is easy to use. It holds approximately one pound of seed at a filling and will spread a uniform pattern of seed of about 3-ft. diameter. Saves you money, because you use less seed when you use a Seedmaster. \$2.95.

# Selected Grasses and Field Seeds

Prices on separate grasses and field seeds are subject to market fluctuations and therefore are subject to change without notice.

**Illahee Creeping Red Fescue.** A permanent lawn grass that is particularly adapted to the shade. It spreads from the roots, making a dense turf which tends to crowd out weeds. Because of its deep roots, it is capable of standing dry weather. Grows well in sunny areas also. Lb. \$1.50; 10 lbs. \$14.00; 25 lbs. \$33.75.

**Kentucky Blue Grass.** Used mostly as a lawn grass. A permanent type of grass that produces dense, tough sod of a deep green color. It is slow in becoming established. Lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$25.00.

**Fancy Red Top.** A nurse grass that lives about three years on turf kept cut. It gives a fine texture the first year of growth and then becomes quite coarse during the second and third years. It makes quick growth, and nurses the permanent grasses until they become established. Lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$25.00.

**Timothy.** A tall-growing Meadow Grass used mostly for hay and pasture. Grows quickly. Lb. 35 cts.; 10 lbs. \$3.25; 25 lbs. \$7.50.

**Colonial Bent.** This permanent grass, very fine in texture, is similar to that used on putting greens. Spreads rapidly by creeping underground roots. Requires close cutting and plenty of moisture. Lb. \$1.75; 10 lbs. \$17.00; 25 lbs. \$40.00.

**Domestic Rye Grass.** Also known as Common Rye Grass. A quick grower often used in lawn grass seed mixtures as a nurse grass to prevent the soil from washing. Lb. 35 cts.; 10 lbs. \$3.00; 25 lbs. \$6.25.

**Orchard Grass.** A field grass used in pastures and meadows. Lb. 75 cts.; 10 lbs. \$7.00; 25 lbs. \$16.25.

**Perennial Rye Grass.** A short-lived perennial lasting three to four years. Used as a nurse grass in lawn seed mixtures and also in meadow mixtures for hay and pasture. Good for a temporary lawn. Lb. 45 cts.; 10 lbs. \$4.25; 25 lbs. \$10.00.

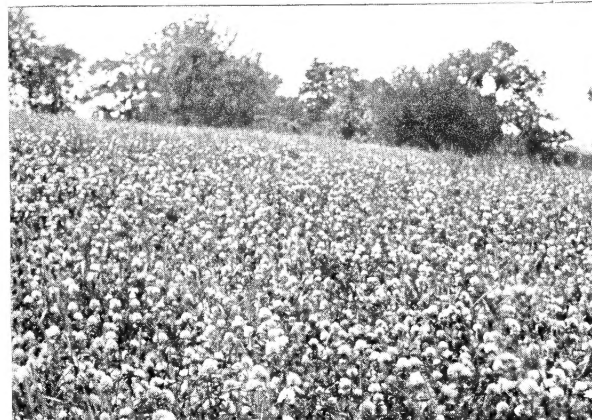

**Poa trivialis.** Rough-stalked Meadow Grass. This variety of Blue Grass is available again. Thrives in shaded lawn areas. Deep green in color. Lb. \$1.25; 10 lbs. \$11.50.

**Italian Rye Grass.** A good temporary grass to grow in shaded areas. It is coarse in texture, like the other rye grasses. Lb. 40 cts.; 10 lbs. \$3.75; 25 lbs. \$8.75.

**New Zealand Chewing's Fescue.** A permanent grass particularly adapted to the shade. The blades are very fine and wiry and are gray-green in color. Its deep roots and tough texture makes it a very hardy and durable grass. It will also grow in sunny areas. Lb. \$1.35; 10 lbs. \$13.00; 25 lbs. \$31.25.

## Meadow Grass Fertilizer

Fertilize your meadows and pasture areas with a complete fertilizer known as 5-10-5. It contains 5% nitrogen, 10% phosphoric acid, and 5% potash. Apply as early as possible in the spring. Use 1200 lbs. per acre. 100 lbs. \$4.25; 500 lbs. \$20.00; 2000 lbs. \$72.00.

A field of red clover

## Field Clovers

(60 lbs. per bus.)

Clovers are legumes. They take nitrogen from the air and put it into the soil and are, therefore, real soil improvers.

**Alfalfa.** A forage plant yielding an immense crop of hay. It likes lime. Sow 20 to 30 lbs. per acre. Lb. \$1.15; 10 lbs. \$11.00.

**Alsike.** A perennial Clover usually sown with other field grasses such as timothy and Red Clover. Excellent for pasture or hay. Lb. \$1.00; 10 lbs. \$9.50.

**Ladino Clover.** A large type of white Clover used in pasture mixtures for grazing, hay and silage. It is good soil improver. When sown alone, 3 to 4 lbs. per acre is used. If sown with a mixture, 1 to 2 lbs. is recommended. Lb. \$3.25; 10 lbs. \$30.00.

**Red Clover, Domestic.** One of the most nutritious of forage plants. If sown broadcast, 10 to 15 lbs. per acre is used. Lb. \$1.10; 10 lbs. \$10.00.

## Flowers To Plant Early Indoors

Some annuals that can be started indoors or in the hot-bed are: Dwarf Dahlias, Asters, Alyssum, Verbenas, Petunias, Carnations, Salvias, Nicotiana, Ageratum, Sweet Peas, Snapdragons, Lobelias, Phlox Drummondii, and Stocks. The seed may be started in flower pots or even old coffee cans provided they are properly drained; use the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each container. Such containers require less space than flats, and may be handled much more easily. Set the container in a saucer or similar receptacle which is constantly filled with water. The pot automatically soaks up the amount of moisture required. To insure against damping off, mix Semesan with the seeds at time of planting.

# Perennial and Biennial Flower Seeds

Jim, Kathy, and Maureen McArdle admire the beauty of Hardy Phlox.

DELPHINIUM, Pacific Giants Hybrids

**217 ACHILLEA, The Pearl.** 2 ft. A vigorous perennial producing long slender stems of double white bloom from June to September. Pkt. 25 cts.

**221A ACONITUM Napellus.** 3 ft. Spikes of dark blue flowers appear in early summer. Pkt. 25 cts.

Many hardy perennials and biennials (plants that require two years to produce bloom, after which they set seed and die) are easily grown from seed. An important thing to remember is that seed should be started as early as possible in order to develop good-sized plants which will winter over easily. Seedlings of most perennials can be carried over winter with the protection of a light mulch. Most biennials, however, require covering or wintering in a coldframe, especially in exposed areas. Raising your own plants from seed is an easy and inexpensive way to develop a perennial border.
